the new generation of water softeners for families.

Water softening is the **removal of calcium, magnesium**, and certain other metal cations in hard water. The resulting soft water is more compatible with soap and extends the lifetime of plumbing. **Water softening is usually achieved using ion-exchange resins.**

Ion-exchange resins are used to replace the magnesium and calcium ions found in hard water with sodium ions. When the resin is fresh, it contains sodium ions at its active sites.

When in contact with a solution containing magnesium and calcium ions (but a low concentration of sodium ions), the magnesium and calcium ions preferentially migrate out of solution to the active sites on the resin, being replaced in solution by sodium ions. This process reaches equilibrium with a much lower concentration of magnesium and calcium ions in solution than was started with.

The resin can be recharged by washing it with a solution containing a high concentration of sodium ions (e.g. it has large amounts of common salt, NaCl, dissolved in it). The calcium and magnesium ions migrate off the resin, being replaced by sodium ions from the solution until a new equilibrium is reached. The salt is used to recharge an ion-exchange resin which itself is used to soften the water.

| | CODE | MODEL | CYCLE | FLOW RATE ($\Delta P=0,2$ BAR) | CONN. | SIZE mm | | |
|--|----------|-------------|---------------------|------------------------------------|-------|------------|-----|-----|
| | | | m ³ x°Fr | Lt/h | | A | B | C |

SIZE YOUR WATER SOFTENER

The water softener is chosen based on water hardness and the number of flats. The box resulting from the cross between hardness and no. of flats determines the choice. Numbers indicate the litres of cationic resin needed in water softener tanks.

| NO. FLATS | NO. USER | DAILY CONSUMPTION | SOFTENER SIZE, HARDNESS IN °F | | | | |
|-----------|----------|-------------------|-------------------------------|-------|-------|-------|-------|
| | | | 15/30 | 30/35 | 35/40 | 40/45 | 45/50 |
| 1 | 2-4 | 300-600 | 10 | 15 | 15 | 15 | 20 |
| 2-3 | 4-8 | 600-1000 | 20 | 20 | 20 | 30 | 30 |
| 3-4 | 8-12 | 1000-1800 | 30 | 30 | 30 | 30 | 30 |

Saving

you can save up to 20% on the energy costs and up to 90% for maintenance.

Functional

Calculate and use the right reserve of softened water, favoring lower consumption / waste of water and salt compared to traditional water softeners.

Compliance

DM 174 - DM 25/2012.

THE WATER SOFTENER

FUNCTIONING

The regeneration is completely automatic and takes place in five stages during the day and time selected. During the regeneration cycle, the water softeners, closes a BY-PASS automatically who guarantees the supply of water to the user.

ADVANTAGES

| THE ADVANTAGES OF SOFT WATER TO A FAMILY OF 4 PERSONS | SAVING |
|---|--------|
| Soap and Detergents | 55% |
| Linen Use | 33% |
| Energy for heating | 60% |
| Appliances Maintenance | 92% |

Decrease of kidney stones formation risk. Soft and gentle hair to comb. No need to dry dishes, glasses and silverwares. Scale deposits are eliminated completely. The garments will be soft to the touch in absence of calcium infiltrated into the tissues, and the colors are kept bright. The foods will cook faster and even better, boiled meat will be tender and less fibrous, cooked vegetables will have their natural color. Tea and Coffee regain their true flavor.

PROBLEMS OF THE WATER

Scale deposits, incrustations and corrosion: The incrustation is the cause of the reduced thermal exchange. Lime deposits lead to an obstacle in heat exchange and a waste of energy, they can also cause a breakage of the metal in correspondence to the points of higher exchange with the consequent need of components replacement.

PROTECTION OF THE BOILER

The soft water prolongs the boiler's lifetime and reduces the scale deposits formed by minerals in hard water. It also saves your money thanks to the reduced energy consumption (17% to 21%) needed to heat water.

PROTECTION OF PIPES

Scale deposits may clog the pipes after a certain period of time. If pipes are clogged the water flow is slower and the pressure reduced drastically. A water softening system can prevent this effect.

REMOVAL OF SPOTS

When the bathroom's appliances benefit of soft water there will be no more unsightly deposits, stains or dirt around the faucets.

SKIN PROTECTION

No more irritations caused by shaving. The razor will glide gently on your face thanks to the soft water.

HAND PROTECTION

The cause of hands to become red or chapped is attributable to limescale in water. The soft water caresses and does not irritate your skin.

COOLING SENSATION

Set down soft water in the bath tub and feel the different freshness. The absence of calcium favors the breathing of the skin pore.

CLEANING EASIER

Washing floors, tiles and wood surfaces become easier and faster with soft water because this eliminates the excess of soap suds.

THE EUROACQUE FACTORY IS PARTIALLY POWERED BY RENEWABLE ENERGY THROUGH THE USE OF A MODERN PHOTOVOLTAIC SYSTEM
